

Lab 3: Image Manipulations using OpenCV

Name: Nasser Asaad Alyousef

Student ID: 2240002150

In this lab I used OpenCV to read, save and convert images between color spaces (grayscale and YUV). For the assessment I applied geometric transformations to the cameraman image: 2x resizing, rotation by 120 degrees and shearing. I then applied intensity transformations: negative, log ($c = 46.05$) and power law (gamma 0.6, which brightened dark regions). Geometric transformations change pixel positions, while intensity transformations change pixel values.
